## REPORT FROM THE LABORATORIES

Presiders:

Frank Helus, DKFZ, Heidelberg, F.R.G.

Ron Finn, Memorial Sloan Kettering Cancer Center, N.Y.

One of the most informative sessions of this workshop, exemplified by both poster presentations and frank audience participation, was the Report from the Laboratories.

The topics and audience discussions were focused on three main themes: (a) cyclotron targetry, principally the oxygen-18 enriched water target and transport systems for the generation and delivery of fluorine labelled fluoride anion; (b) the introduction and description of newly commissioned cyclotron facilities; and (c) topics on radiopharmaceutical chemistry.

Some of the reports of experiences by various investigators are reproduced in the pages that follow. The openness and candid discussions amongst the registrants and speakers continues to indicate that this session was both informative to the newer members of the workshop as well as educational and thought provoking to the alumni members.
