

CONTENTS

Session A:

Introduction	1
Reports from the Labs, <i>John Clark, Cambridge University, UK and Frank Helus, DKFZ, Germany</i>	5
Compilation of (Heavy Metal) PET Isotopes Corresponding to ERT and SPET Nuclides for Research Applications at a PET Centre, <i>H.-W. Thümmel, I. Kämpfer Department of Nuclear Medicine, University of Leipzig, Germany</i>	8
Radionuclide Metrology at NRCC, <i>D. Santry, Institute for National Measurement Standards, National Research Council of Canada</i>	13
Establishment of a European Astatine Collaboration, <i>R. Weinreich, Institut für Medizinische Radiobiologie der Universität Zürich und des Paul Scherrer Instituts, Switzerland</i>	14
The New Cyclotron at SINR for Radiopharmaceutical Production, <i>Y. Li, Shanghai Institute of Nuclear Research, Academia Sinica, China</i>	16
Linear Sources of Ge-68, <i>V.E. Yants, A.Y. Zyuzin, B.L. Zhuikov, Institute for Nuclear Research; Moscow, Russia</i>	17
The TR30 Cyclotron and Targetry Upgrade, <i>N.R. Stevenson, TRIUMF, Vancouver, B.C. Canada</i>	19

Session B:

Accelerators, <i>Richard Ehrenkauf, Bowman Gray Medical School, and Karl Erdman, Ebco Technologies, Canada</i>	23
Utilizing the Tandem Cascade Accelerator for the Routine Production of ¹⁵ O Radiopharmaceuticals for Neurological PET Studies, <i>G. Gaehle, C.S. Dence, K. Lechner, M.J. Welch Mallinckrodt Institute of Radiology, Washington University Medical Center</i>	26
NHVG: Nested High Voltage Generator, A Compact Direct Current Accelerator, <i>W. Webster, PracSys Corporation, Massachusetts</i>	28
¹⁵ O-Production and Operational Experiences of Cyclone 3 at Turku PET Center, <i>H. Sepilä, M. Teräs, PET Center, Turku University Central Hospital, Finland</i>	31
Status of the AccSys PULSAR ^(TM) System, <i>R.W. Hamm, AccSys Technology, Inc., California</i>	33
Status of AccSys Technology's PULSAR ^(TM) System, <i>G.D. Robinson, Jr. AccSys Technology, Inc., California</i>	34
Accelerator and Isotope Target Development at Newton Scientific Incorporated, <i>R.E. Shefer, R.E. Klinkowstein, Newton Scientific, Inc., Massachusetts</i>	37
³ He RFQ for PET Isotope Production, A Brief Progress Report, August 1995, <i>K.A. Krohn, J.M. Link, P. Young, W.K. Hagan, R. Pasquinelli, B. Chrisman, G.T. Bida, University of Washington; Science Application International Corporation; Fermi National Accelerator Laboratory; Biomedical Research Institute of Northwest Louisiana</i>	38

An Overview of the New Biomedical Isotope Facility and the RDS-111 Deep Valley Cyclotron at Lawrence Berkeley Laboratory, <i>H.F. VanBrocklin, J.P. O'Neil Center for Functional Imaging, Lawrence Berkeley Laboratory, University of California</i>	40
Compact Proton Linac Systems for Medical and Industrial Applications, <i>D.A. Swenson, Linac Systems, Texas</i>	42
C-18 Preliminary Specification, <i>G. Hendry, Cyclotron, Inc., California</i>	45
New Accelerator Radioisotope Production Facility at Institute for Nuclear Research, Moscow, <i>B.L. Zhuikov, V.M. Kokhanyuk, Yu.G. Gabrielyanz, L.V. Karvchuk, N.A. Konyakhin Institute for Nuclear Research; Moscow, Russia; "Cyclotron" Company; Obninsk, Kaluga, Russia</i>	46
Cyclotron and RI Production System for Clinical PET, <i>M. Sasaki, Y. Adochi, A. Tanaka Sumitomo Heavy Industries, Ltd. Japan</i>	49

Session C:

Target Production and yields, <i>Robert Dahl, North Shore Hospital, New York, USA and Nigel Stevenson, TRIUMF, Canada</i>	53
Production of [¹⁸ F]F ₂ Using the ¹⁶ O(³ He,p) ¹⁸ F Reaction <i>A. Bishop, N. Satyamurthy, G. Bida, UCLA School of Medicine; Biomedical Research Foundation of Northwest Louisiana</i>	54
Optimization of Radioisotopes Production Using Gas Targets, <i>M. Sajjad, J-S. Liow, University of Minnesota</i>	57
A Comprehensive Study of the ¹⁸ F Production via ²⁰ Ne(d,a) ¹⁸ F Reaction, <i>V. Uhler, F. Helus, DKFZ, Heidelberg, Germany</i>	60
Neon Gas Target and Synthesis System for the Production of 2-[¹⁸ F]Fluoro-2-deoxy-D- glucose with a 66 MeV Proton Beam, <i>F.M. Nortier, F.J. Haasbroek, J.H. Langenhoven, E. Vorster National Accelerator Centre, Faure, South Africa</i>	68
Iodine-120, A New Positron Emitting Radionuclide for PET Radiopharmaceuticals, <i>J. Zweit, S.K. Luthra, F. Brady, P. Carnochan, R.J. Ott, T. Jones, Institute of Cancer Research/Royal Marsden Hospital; MRC Clinical Science Centre Hammersmith Hospital, U.K.</i>	76
"Failsafe" Gas Target for Production of I-123 from Xe-124, <i>M. Firouzbakht, D.J. Schlyer, A.P. Wolf, Brookhaven National Laboratory, Upton, New York</i>	79
On-Line Production of Radioiodines with Low Energy Accelerators , <i>N.R. Stevenson, K. Buckley, W.Z. Gelbart, E.T. Hurtado, R.R. Johnson, T.J. Ruth, S.K. Zeisler, TRIUMF, Canada</i>	82
Quality Control of ¹²⁴ I, <i>R. Weinreich, E.J. Knust, Institut fur Medizinische Radio biologie der Universitat Zurich und des Paul Scherrer-Instituts; Arbeitsgruppe Nuklearchemie und Radiopharmazie, Klinik fur Nuklearmedizin, Switzerland</i>	84
High-Yield Production of Iodine-124 Using the ¹²⁵ Te(p,2n) ¹²⁴ I Reaction, <i>G. Vaidyanathan, B.W. Wieland, R.H. Larsen, J. Zweit, M.R. Zalutsky, Duke University Medical Center, North Carolina; Institute of Cancer Research, Royal Marsden Hospital, U.K.</i>	87
Astatine-211 Radiotherapeutic Agents: Production of Clinically Relevant Quantities and Quality Using an Internal Target System, <i>R.H. Larsen, B.W. Wieland, M.F. Dailey, G. Vaidyanathan, P.K. Garg, M.R. Zalutsky Duke University Medical Center, North Carolina</i>	89

Development of a Routine System for the Cyclotron Production of Copper-64, <i>D.W. McCarthy, R.F. Shefer, R.E. Klinkowstein, C.S. Cutler, C.J. Anderson, M.J. Welch, Mallinckrodt Institute of Radiology, Washington University School of Medicine, Missouri</i>	92
Simple Methods for Preparation of High Purity Cu-67 and Y-90, <i>P. Blauenstein, R. Schwarzbach, K. Zimmermann, P.A. Schubiger, Paul Scherrer Institute, Switzerland</i>	94
Separation of Gallium Isotopes from Enriched Zinc Targets, <i>V. Tolmachev, H. Lundqvist, Institute for Theoretical and Experimental Physics, Moscow; Dept. of Radiation Sciences, Uppsala University, Sweden</i>	96
Production of Germanium-68 in Russia, <i>A.A. Razbash, Y.G. Sevastyanov, V.E. Pavlihin, N.A. Konyakhin, N.N. Krasnov, Cyclotron Co., Ltd., Obninsk, Russia</i>	99
Development of Arsenic Production Using a Low Energy Accelerator, <i>V. Tolmachev, H. Lundqvist, Institute for Theoretical and Experimental Physics, Moscow; Uppsala University, Sweden</i>	101
A Novel Krypton Gas Target System for the Production of Rb-81/Kr-81-Generators, <i>G.F. Steyn, C.J. Stevens, F.M. Nortier, National Accelerator Centre, South Africa</i>	104
Production of Strontium-82 in Russia, <i>B.L. Zhuikov, V.M. Kokhayuk, N.A. KoNew Yorkakhin, A.A. Razbash, J. Vincent, Institute for Nuclear Research; Moscow, Russia; "Cyclotron" Company, Obninsk, Kaluga reg., Russia; TRIUMF, Canada</i>	112
Comparative Studies on the Production of High-Purity ^{94m} Tc Using Small and Medium -Sized Cyclotrons, <i>F. Rösch, F.-O. Denzler, M. Faßbender, A.F. Novgorodov, S.M. Qaim Institut für Nuklearchemie, Forschungszentrum Jülich GmbH, Germany and Laboratory of Nuclear Problems, JINR, Dubna, Russia</i>	114
Is the Production of ¹⁸⁶ Re with Cyclotron Irradiations an Alternative to Neutron Activation in a Reactor, <i>R. Schwarzbach, P. Bläuenstein, J. Jegge, P.A. Schubiger Paul Scherrer Institute, Villigen PSI, Switzerland</i>	117
Production of the Positron-Emitting Indium Isotope ^{110g} In via the ¹¹⁰ Cd(³ He,3n) ¹¹⁰ Sn→ ^{110g} In-Process, <i>F. Rösch, A.F. Novgorodov, Y.-M. Tsai, S.M. Qaim Institut für Nuklearchemie, Forschungszentrum Julich, Germany; Laboratory of Nuclear Problems, JINR Dubna, Russia; Institute of Nuclear Energy Research, Taipei, Taiwan</i>	119
Excitation Functions of ¹⁴⁷ Sm(³ He,xn)-and ¹⁴⁴ Sm(α,xn)-Reactions and Chemical Separation Relevant to the Production of ¹⁴⁷ Gd, <i>F.-O. Denzler, F. Rösch, A.F. Novgorodov, N.A. Lebedev, S.M. Qaim Institut für Nuklearchemie, Forschungszentrum Julich, Germany; Joint Institute for Nuclear Research, Dubna, Russia</i>	122
(p,xn) and (p,pn) Processes on ¹⁹⁷ Au: New Proton Monitor Reactions up to 30 MeV, <i>F. Szelecsenyi, T.E. Boothe, E. Tavano, A. Fenyvesi, S. Takacs, F. Tarkanyi Cyclotron Facility, Mount Sinai Medical Center; Institute of Nuclear Research of the Hungarian Academy of Sciences, Hungary</i>	125
Evaluation of Cross Sections/Thick Target Yields for ²⁰¹ Tl Production, <i>F. Szelecsenyi, T.E. Boothe, E. Tavano, A. Fenyvesi, F. Tarkanyi, Cyclotron Facility, Mount Sinai Medical Center, Florida</i>	127
Feasibility Study of ²⁰¹ Tl Production Using Proton-Induced Reactions on Highly Enriched Mercury Isotopes, <i>V.I. Novikov, A.A. Sebiakin, N.R. Stankow Russian Research Centre "Kurchatov Institute", Moscow, Russia</i>	128

HFIR-Produced Radioisotopes of Current Medical Interest, <i>S. Mirzadeh, A.L. Beets, F.F. Knapp, Jr., Oak Ridge National Laboratory, Tennessee</i>	129
--	-----

Session D:

Target Engineering, <i>Jerry Nickles, University of Wisconsin and David Schlyer, Brookhaven National Lab</i>	135
Cyclotron Target Beam Homogeneity Measurement Device, <i>J. DeVinney, M. Ladecki, G.W. Kabalka, C.W. Alvord, J. Nelson The University of Tennessee, Tennessee</i>	137
Novel Recoil-Release Multilayered Target for the Production of ¹⁵ O Secondary Radioactive Beams, <i>M. Gai, J.-Z. Zhang, B.L. Halpern, S.R. Boorse, J.J. Schmitt, T. Delbar, P. Leleuz, M. Loiselet, C. Michotte University of Connecticut; Jet Process Corporation; Universite Catholique, Louvain-La-Neuve, Belgium</i>	140
Correlation of Hole Size in Support Windows with Calculated Yield Strengths, <i>D.J. Schlyer, M.L. Firouzbakht, Brookhaven National Laboratory, Upton, New York</i>	142
Gas Density Distributions in Cyclotron Targets, <i>D.J. Schlyer, J.R. Dahl, R.A. Ferrieri, B.W. Wieland, S.-J. Heselius, M. Firouzbakht, G. Gigante, A.P. Wolf Brookhaven National Laboratory, New York; North Shore University Hospital, New York; Duke University, N.C.; Abo Akademi, Turku, Finland; University of Rome, Italy</i>	144
Novel Targets for Radioisotope Generation Made by the Jet Vapor Deposition ^(TM) Process, <i>J.-Z. Zhang, S.R. Boorse, B.L. Halpern, J.J. Schmitt, Jet Process Corporation; University of Connecticut, Connecticut</i>	147
Heat Transfer in a Liquid Rubidium - ⁸² Sr Isotope Production Target, <i>J.W. Lenz, J.S. Vincent, JW Lenz and Associates, Texas; TRIUMF, Canada</i>	149
Modeling of Target Heat Transport in BLIP, <i>L.F. Mausner, J.C. Hock, Brookhaven National Laboratory, New York</i>	152
Target Systems for the RDS-111 Cyclotron, <i>C.W. Alvord, S.S. Zigler, CTI Cyclotron Systems, Tennessee</i>	155
Porous Carbon Materials for PET Radioisotope Production Targets, <i>C.W. Alvord, R.R. Lagasse, J.L. Schroeder, G. Kabalka, CTI Cyclotron Systems, Tennessee</i>	162
Surface-Sensitive Analysis of Materials Used in [¹⁸ F]Electrophilic Fluorine Production, <i>C.W. Alvord, A.L. Glover, N. Satyamurthy, G. Bida, CTI Cyclotron Systems, Inc., TN; Lockheed Martin Energy Systems, Inc.; Dept. of Molecular and Medical Pharmacology, UCLA School of Medicine, CA; Biomedical Research Foundation of Northwest Louisiana, LA</i>	167
A Tandem Target System Using ¹⁶ O(p,pn) ¹⁵ O and ¹⁶ O(p,α) ¹³ N on Natural Water, <i>B.W. Wieland, C.J. McKinney and R.E. Coleman, Duke University Medial Center, Durham, North Carolina</i>	173

Session E:

In-Target Chemistry, <i>Richard Ferrieri, Brookhaven National Lab, New York and Michael Welch, Washington University, Missouri</i>	183
--	-----

rk

An Optical Cell and Light Source for Carrying Out Rapid High-Yield Radiotracer Syntheses Involving [¹⁸ F]-Fluoride©, <i>R.A. Ferrieri, D.J. Schlyer Brookhaven National Laboratory, Upton, New York</i>	239
Microwave-Induced Preparation of [¹¹ C]Amino Acids via NCA-Bücherer-Strecker Synthesis©, <i>C. Giron, G. Luurtsema, M.G. Vos, P.H. Elsinga, G.M. Visser, W. Vaalburg, PET-Center, Groningen University Hospital, The Netherlands</i>	242
Efficient Electrochemical Recovery of [¹⁸ F]Fluoride from Water©, <i>K. Hamacher, G. Blessing, Institut für Nuklearchemie Forschungszentrum, Jülich, Germany</i>	245
Our Problems with Small Bolus Water Transfer and a Simple Green Solution, <i>S.K. Zeisler, K.R. Buckley, T.J. Ruth, Triumph, Vancouver B.C., Canada</i>	247
Sep Pak ^(TM) as Alternative to Rotary Evaporators for Radiopharmaceutical Formulations©, <i>C. Lemaire, A. Plenevaux, G. Del Fiore, J. Aerts, A. Luxen, D. Le Bars, D. Comar, Cyclotron Research Center, Liège, Belgium; CERMEP, Lyon, France</i>	250
Automated Radioisotope Extractor (AUREX)©, <i>R.A. Ferrieri, D.J. Schlyer, Brookhaven National Laboratory, Upton, New York</i>	253
An Integrated Remote System for Collection and Clinical Delivery of Cyclotron Produced Inhalation Gases©, <i>R.L.E. Ehrenkauser, H. Chilton, F. DeFilippi Bowman Gray School of Medicine of Wake Forest University, North Carolina</i>	256
Technical Performance and Operating Procedure of a Bedside [¹⁵ O]Water Infuser©, <i>H.J. Tochon-Danguy, J.C. Clark, A. Janus, J.I. Sachinidis, Centre for Positron Emission Tomography, ARMC, Melbourne; MRC Cyclotron Unit, Hammersmith, London, U.K.</i>	258
A Simple Remote Technique for Sterile Production of [¹⁵ O]Water and a Remote Injector Made of Sterile Disposable Components, <i>R.K. Bera, P. Yost, S. Paulik, L.R. Hendershott, R. Gentilcore, V.J. Lowe, J.W. Fletcher St. Louis University; St. Louis VA Medical Center, Missouri</i>	261
A [¹¹ C]Carbon Dioxide Generator, <i>P.S. Kruijer, J.D.M. Herscheid, RadioNuclideCentre, Free University, Amsterdam, The Netherlands</i>	271
A Remote [¹¹ C]Methyl Iodide System for the Siemens RDS 112 Cyclotron Based upon the Johns Hopkins PET Center System, <i>N.R. Simpson, C.A. Mathis University of Pittsburgh, Pennsylvania</i>	273
Siemens/CTI/IBA Automated System for Production of [¹¹ C]Methyl Iodide: On Going Evaluation, Operating Parameters and Field Modifications©, <i>R.L.E. Ehrenkauser, T. Morton, R.H. Mach, F. DeFilippi, Bowman Gray School of Medicine of Wake Forest University, NC; Siemens Medical Systems, Tennessee</i>	274
Automated Radiosynthesis of PET Radiotracers Using a PLC Controlled System, <i>K. Dowsett, C.J. Steel, F. Brady, MRC Clinical Sciences Centre, Hammersmith Hospital, London, U.K.</i> ...	276
Automation of Radiosynthesis with Low Cost PLC at the CERMEP, <i>D. LeBars, P. Landais, A. Ducret, O. Raynard, L. Veyre, F. Bonnefoi CERMEP, Lyon, France</i>	281
Synthia, A Compact Radiochemistry System for Automated Production of Radiopharmaceuticals, <i>P. Bjurling, R. Reineck, G. Westerberg, J. Schultz, A. Gee, J. Sutcliffe, B. Långströ, Uppsala University PET Centre, Sweden; PET Centre, Arhus Kommunehospital, Denmark; Clinical PET Centre, Guy's and St. Thomas' Hospitals, London, U.K.</i>	282

Preparation of Fludeoxyglucose ¹⁸ F Injection ([¹⁸ F]FDG) via the GE Microlab Device: The Washington University Experience©, <i>S.M. Moerlein, J.L. Bockhorst, G.G. Gaehle, K.L. Lechner, B.A. Siegel, M.J. Welch</i> The Edward Mallinckrodt Institute of Radiology, Washington University School of Medicine, Missouri	286
Development of an Automated Synthesis Apparatus for the [¹³ N]-labeled Compounds Using Anhydrous [¹³ N]Ammonia©, <i>K. Suzuki, N. Shikano, A. Kubodera</i> National Institute of Radiological Sciences, Chiba, Japan; Science University of Tokyo, Japan	288
A Practical Method for the Preparation of [¹¹ C]Acetate©, <i>P.S. Kruijer, T.T. Linden, R. Mooij, F.C. Visser, J.D.M. Herscheid</i> , RadioNuclideCentre, Free University, Amsterdam, The Netherlands	291
Fully Automated and Reliable Chemistry Module for the Production of 2-[¹¹ C]-Thymidine Starting from [¹¹ C]-HCN, Including HPLC Purification©, <i>M.G. Vos, J. Medema, K.P. de Jong, M.J.H. Slooff, E.J.F. Franssen, G.M. Visser, W. Vaalburg</i> Groningen University Hospital, The Netherlands	294
Robotic Synthesis of N-[¹⁸ F]Fluoroethyl Neuroreceptor Ligands for PET©, <i>J.L. Bockhorst, S.M. Moerlein, G.G. Gaehle, M.J. Welch</i> , The Edward Mallinckrodt Institute of Radiology, Washington University School of Medicine, Missouri	297
Automated Preparation of No-Carrier-Added ¹⁸ F-Labelled Radiopharmaceuticals by Means of Heterogeneous Nucleophilic Substitution©, <i>M. Solbach, H.-J. Machulla</i> Eberhard-Karls-Universitat Tübingen, Germany	300
Robotic Synthesis of 6-[¹⁸ F]Fluoro-L-DOPA, <i>E. Livni, J.W. Babich, A.J. Fischman</i> , Massachusetts General Hospital, Massachusetts	302
Automated Production of 6-[¹⁸ F]Fluoro-L-DOPA in a Commercially Available Chemistry Module©, <i>Z.Y. Zhang, G.W. Kabalka, C.P.D. Longford, H.C. Padgett, S.S. Zigler</i> The University of Tennessee; CTI Cyclotron Systems, Inc., Tennessee	305
Development of a Semi-Remote System for the Routine Preparation of [¹⁸ F]6-fluoro-L-metatyrosine to Study Striatal Lesions and Therapeutic Implants in Primates©, <i>J.P. O'Neil, H.F. VanBrocklin</i> Center for Functional Imaging, Lawrence Berkeley Laboratory, California	307
One-Pot Synthesis of 2-Deoxy-2-[¹⁸ F]Fluoro-D-Glucose, <i>C-Y Shiue, G.G. Shiue</i> , University of Pennsylvania, Pennsylvania	310
Fast Quality Control of Short-Lived Radiopharmaceutical Compounds with a Photodiode Array Detector©, <i>A. Plenevaux, C. LeMaire, J. Aerts, G. Del Fiore, A. Luxen</i> Cyclotron Research Center, Lige University Belgium	312
N.C.A. Gas Phase Production of [¹¹ C]Methanol from [¹¹ C]Methane. Application to the On Line Synthesis of [¹¹ C]CH ₃ I©, <i>Christian Crouzel and Denis Fournier Orsay</i> , France	314
A New Method for Production of ¹¹ C-labelled Methyl Iodide from ¹¹ C-Methane©, <i>P. Larsen, J. Ulin and K. Dahlstrom</i> , National University Hospital Copenhagen, Denmark and GEMS PET Systems	316
Production of [¹¹ C] Methyl Iodide by Reaction of ¹¹ CH ₄ with I ₂ ©, <i>Jeanne M. Link, John C. Clark, Peter Larsen, Kenneth A. Krohn</i> , University of Washington, WA; Hammersmith Hospital, London, U.K.; National University Hospital, Copenhagen, Denmark	319

Applied PET Chemistry Studies for U.S. FDA Approval of 2-[¹⁸F]FDG[©], *S.S. Zigler, CTI Cyclotron Systems, Inc., Tennessee* 322

©Denotes papers which appeared in the Special Issue of the Journal of Labelled Compounds and Radiopharmaceuticals Supplement, Volume XXXVII. Eleventh Symposium on Radiopharmaceutical Chemistry Abstracts - Vancouver, B.C., Canada - August 13 - 17, 1995. Reprinted here with the permission of John Wiley and Sons, Ltd.
