Organizing Committees	VI
Meeting Schedule	VII
List of Sponsors	VIII

ACCELERATORS

Organizers: Jeanne M. Link and Ruth Shefer.	1
Introduction to the Session. <i>J. Link. University of Washington, Seattle, WA, USA</i>	2
<i>INVITED TALK: Liquid Gallium Cooling of a High-Power Beryllium Target for Use in Accelerator Boron Neutron Capture Therapy (ABCNT). J.C. Yanch. Nuclear Engineering Department Department and Whitaker College of Health Sciences and Technology MIT, Cambridge, MA, USA</i>	3
New developments in cyclotrons at CTI. <i>B. Alvord. CTI, Inc, Knoxville, TN, USA</i>	6
Liquid gallium cooling of a high-power beryllium target for use in accelerator boron neutron capture therapy (ABCNT). <i>B.W. Blackburn and J.C. Yanch. Nuclear Engineering Department, MIT, Cambridge, MA, USA</i>	7
Feasibility study of ^{149}Tb production at the Tesla accelerator installation. <i>M. Dakovic and J.J. Comor Vin_a Institute of Nuclear Sciences, Belgrade, Yugoslavia.</i>	10
Developments at EBCO. <i>K. Erdman, EBCO Technologies, Inc. Richmond, BC, Canada.</i>	13
A summary of TCA developments since placed in service at Washington University. <i>G.G. Gaehle and M.J. Welch. Washington University, St. Louis, MO, USA.</i>	14
Progress report on the development of a fluorine-18 production target for the AccSys Pulsar(tm) system. <i>R. Hamm and G. Robinson, Jr. AccSys Technologies, Inc., Pleasanton, CA, USA</i>	16
Summary report on evaluation of the 10.5 MeV ^3He RFQ accelerator. <i>K.A. Krohn, J.M. Link, P.E. Young, R. DeHaas, D.J. Larson and R.J. Pasquinelli. University of Washington, Seattle, WA, USA</i>	17
Isotope production at International Isotopes, Inc. <i>I.L. Morgan, H. Hupf, G. King and J. Armbruster. International Isotopes, Denton, TX, USA</i>	21
A second target station for the bombardment of semi-permanent targets at the national accelerator centre. <i>F.M. Nortier, P.J. Binns, J. Hanekom, M.A. Penny, R.E. Quantrill, H.A. Smit, T.J. van Rooyen and V.M.P. Xulubana. National Accelerator Centre, Faure, South Africa</i>	22
MINItrace™ tracer production system - a work in progress. <i>M. Orbe, GE Medical Systems, Uppsala, Sweden</i> ..	23
The new ISAC facility at TRIUMF. <i>T.J. Ruth. TRIUMF, Vancouver, BC, Canada</i>	25
Overview of Accelerator Development at NSI. <i>Robert E. Klinkowstein, Ruth E. Shefer, and Barbara J. Hughey. Newton Scientific, Inc., Cambridge, MA, USA</i>	26
Compact LINAC Systems for Medical Applications. <i>W.J. Starling. Linac Systems, Waxahachie, TX, USA.</i>	28
IBA developments in the field of accelerators. <i>R. Verbruggen, F. Schmitz, M. Ghyoot, F. Vamecq and Y. Jongen. Ion Beam Applications, Louvain la Neuve, Belgium</i>	29

HIGH YIELD [¹⁸F]FLUORIDE PRODUCTION

Organizers: <i>John C. Clark and Stefan K. Zeisler</i>	31
Introduction. <i>J.C. Clark, University of Cambridge, UK</i>	32
High yield [O-18]water target for [F-18]fluoride production on MC-17 cyclotrons. <i>M.S. Berridge, K.W. Voekler and B.J. Bennington. Case Western Reserve University and, University Hospitals of Cleveland. Cleveland, OH, USA</i>	34
Some optimisation studies on the production of [¹⁸ F]F ₂ via the ¹⁸ O(p,n) ¹⁸ F process. <i>E. Hess, G. Blessing, H.H. Coenen and S.M. Qaim. Institut für Nuklearchemie, Jülich, Germany</i>	38
Targetry for the production of ultra high quantities of ¹⁸ F-fluoride: a work in progress. <i>T.J. Ruth, K.R. Buckley, E.T. Hurtado, J. Huser, S. Jivan, K.S. Chun and S. Zeisler. TRIUMF, Vancouver, Canada; Korean Cancer Center Hospital, Seoul, S. Korea; and DKFZ, Heidelberg, Germany</i>	41
Multicurie fluoride-18 in IBA titanium target. <i>P. van der Jagt, P. van Leuffen, F. van Langevelde, P. Kruijjer, M. Ghyoot, F. Schmitz, R. Verbruggen F. Vamecq, C. Destexhe and Y. Jongen. BV Cyclotron VU and IBA, Louvain la Neuve, Belgium</i>	44
Production of [¹⁸ F]fluoride in a water-cooled spherical niobium target. <i>S.K. Zeisler, D.W. Becker and R.A. Pavan. German Cancer Research Center, DKFZ, Heidelberg, Germany and TRIUMF, Vancouver, Canada</i>	48
Further discussion of other commercial [¹⁸ F]fluoride targets	52

AUTOMATION

Organizers: <i>Richard Ehrenkauf and James P. O'Neil</i>	57
Introduction to the Session. <i>Richard Ehrenkauf. Wake Forest University Baptist Medical Center, Winston-Salem, NC, USA</i>	58
Radiopharmaceutical automation: sensors and technology vs. the human experience. <i>R.D. Hichwa, University of Iowa, Iowa City, IA, USA</i>	59
Chemistry system control with LOOKOUT™ control software. <i>K.R. Buckley, TRIUMF, Vancouver, BC, Canada</i>	61
Overview and application of compact, solid-state radiation detectors, <i>L.R. Carroll. Carroll/Ramsey Assoc. Berkeley, CA, USA</i>	63
Heated nitrogen to rapidly evaporate solutions. <i>J.B. Downer, W.H. Margenau and M.J. Welch. Washington University, St. Louis, MO, USA</i>	64
Modeling radiation levels within the GEMS methyl iodide box as a way to predict I ₂ tube lifetime. <i>R.A. Ferrieri, D.J. Schlyer and J.S. Fowler. Brookhaven National Laboratory, Upton, NY, USA</i>	67
The development of an FDG module designed for the distribution setting. <i>S. Zigler. CTI, Inc., Knoxville, TN, USA</i>	69
A new synthesizer for the routine production of FDG using standard disposable components. <i>C. Mosdzianowski and J-L. Morelle. Coincidence Technologies, Liège, Belgium</i>	70
Developments in FDG synthesis and production. <i>M. Jackson, Nuclear Interface, LLC, Jackson, TN, USA</i>	73
In-Line conductivity sensor measurement of irradiated target water during F-18 production, <i>C.J. McKinney. Duke University Medical Center, Durham, NC, USA</i>	75

On-Line measurement of the evolution of radiolysis gas from an F-18 Target. <i>C.J. McKinney, M.F. Dailey and B.W. Wieland. Duke University Medical Center, Durham, NC, USA.</i>	77
An alternative approach to filling and emptying syringes, external pressure rather than a syringe pump or piston. <i>J.M. Link, K.A. Krohn. University of Washington, Seattle, WA, USA.</i>	79
Integrating a high yield high-pressure water target from GE onto the CS-15 cyclotron at Washington University. <i>G.G. Gaehle, W.H. Margenau and M.J. Welch. Washington University, St. Louis, MO, USA ...</i>	81
A peltier thermal cycling unit for rapid radiopharmaceutical synthesis. <i>C.J. McKinney and M.W. Nader Department of Radiology, Duke University Medical Center, Durham, NC, USA</i>	83
A robust, miniature in-line monitoring systems for radioactive gas production. <i>M.L. Renton, P.B. Burke, D.B. Mackay and A.S.O. Ranicar. MRC Cyclotron Unit, Hammersmith, London, UK</i>	85
Medi-SMARTS On-line radiation monitoring system for PET laboratories. <i>A. Osavitsky. Rotem Industries. Israel.</i>	89
An advanced [¹⁵ O]water infuser. <i>H.T. Sipilä and K. Eklund. Turku PET Center, Turku, Finland.</i>	90
Noise and circuit analysis for the unbiased photodiode radiation detector. <i>N.D. Solomonson, J.M. Link and K.A. Krohn. University of Washington, Seattle, WA, USA</i>	92
Semi-intelligent control of automated synthesis using a toshiba EX40+ PLC. <i>C.J. Steel, M.L. Renton and V.W. Pike. Hammersmith Hospital, London, UK</i>	95
A versatile synthesis apparatus for easy automation. <i>G. Westera, J.T. Patt, C.-O. Sjöberg, N. Schmidt and P.A. Schubiger. Center for Radiopharmaceutical Science, Paul Scherrer Institute, Zürich, Switzerland. ...</i>	98
Economical radioactivity measurement and dose dispensing. <i>K.W. Voeckler and M.S. Berridge. University Hospitals of Cleveland and Case Western Reserve University, Cleveland, OH, USA.</i>	99
Basic hydrolysis of 2- [¹⁸ F]fluoro-2-deoxy-1,3,4,6-tetra-O-acetyl-D-glucose on a silica support in the production of FDG. <i>C.J. Steel and V.W. Pike. MRC Cyclotron Unit, Hammersmith Hospital, London, UK</i>	101
NON-STANDARD ISOTOPE PRODUCTION	
Organizers: <i>Timothy J. McCarthy and Syed Qaim.</i>	103
Introduction to the Session. <i>S. Qaim, Institut für Nuklearchemie, Jülich, Germany.</i>	104
Measurement of excitation functions using a pellet method: cross-sections for ¹⁴⁰ Ce(p,xn). <i>D.W. Becker and S.K. Zeisler. German Cancer Research Center (DKFZ), Heidelberg, Germany</i>	105
Carbon-10 gases wait for no man. <i>M. Jensen, R.J. Nickles, S. Holm and M.J. Schueller. University of Wisconsin-Madison &, Madison, WI, USA</i>	108
An alternative route for the production of ¹⁰³ Pd. <i>M. Fassbender, F.M. Nortier, I.W. Schroeder and T.N. van der Walt. National Accelerator Centre, Faure, South Africa</i>	111
Production of high quality palladium-103 on cyclotron. <i>A.A. Razbash, N.N. Krasnov, Y.G. Sevastianov, N.A. Konyakhin, A.A. Ponomarev, V.N. Mironov and P.P. Dmitriev. Cyclotron Company, Obninsk, Russia. ...</i>	113
Europium-155 - Alternative to gadolinium-153?. <i>A.A. Razbash and Y.G. Sevastianov. Cyclotron Company, Obninsk, Russia</i>	114

Study of physico-chemical processes in sandstones by PET. <i>P. Goethals PET-center UZ/RUG, Gent, Belgium</i> ,	115
Preliminary results on the production of ⁶⁶ Ga, non-conventional positron emitter. <i>J. Kozirowski, R.D. Finn, K.S. Pentlow, A. Löqvist, Y. Sheh, M. McDevitt and S.M. Larson. Memorial Sloan-Kettering Cancer Center, New York, NY, USA</i>	117
Comparison of gallium-66 production methods for the development of automated processing systems. <i>M.R. Lewis, R. Laforest, D.E. Reichert, W.H. Margenau, R.E. Shefer, R.E. Klinkowstein, B.J. Hughey and M.J. Welch. Washington University, St Louis, MO, and Newton Scientific, Inc, Cambridge, MA, USA.</i> ...	120
Routine production of [⁷⁵ Br]bromide in a gas target. <i>S.K. Zeisler and H. Gasper. German Cancer Research Center (DKFZ), Heidelberg, Germany.</i>	124
Investigation of I-124, Br-76, and Br-77 production using a small biomedical cyclotron-can induction furnaces help in the preparation and separation of targets? <i>T.J. McCarthy, R. Laforest, J.B. Downer, A.-R. Lo, R.E. Shefer, R.E. Klinkowstein, B.J. Hughey and M.J. Welch. Washington University, St Louis, MO, and Newton Scientific, Inc, Cambridge, MA, USA</i>	127
Production of ¹²⁴ I at small and medium sized cyclotrons. <i>S.M. Qaim, F.M. Nortier, G. Blessing, I.W. Schroeder, B. Scholten, T.N. vander Walt and H.H. Coenen. Institut für Nuclearchemie, Jülich, Germany and National Accelerator Centre, Faure, South Africa</i>	131
A facility for the safe recovery of high specific activities of iodine-124 produced by the ¹²⁴ Te(p,n) ¹²⁴ I reaction. <i>D.J. Brown, D.B. Mackay, J. Coleman, S.K. Luthra, F. Brady, S.L. Waters and V.W. Pike. MRC Cyclotron Unit, Hammersmith Hospital, London, UK</i>	134
Solid targetry for cyclotron production of intermediate-lived radioisotopes. <i>B.J. Hughey, R.E. Shefer and R.E. Klinkowstein. Newton Scientific, Inc. Cambridge, MA, USA</i>	137
Cobalt-55: targetry and production at energies less than 11 MeV. <i>J.P. O'Neil and H.F. VanBrocklin. LBL Biomedical Isotope Facility, Berkely, CA, USA.</i>	138
No carrier added separation of tellurium from antimony. <i>V. Tolmachev and H. Lundqvist. Department of Chemistry, Uppsala University, Uppsala, Sweden.</i>	140
Direct comparison of ion-exchange and solvent extraction for separation of iron-52 from nickel target. <i>V.Tolmachev and H. Lundqvist. Department of Chemistry, Uppsala University, Uppsala, Sweden</i>	143
REPORTS FROM LABORATORIES	
Organizers: <i>R. Jerry Nickles and Robert Dahl.</i>	147
An overview of the PET facility in St. Petersburg. <i>R. Krasikova, Russian Academy of Science, St. Petersburg, Russia.</i>	148
International Nuclear target design society: report from the 19th world congress. <i>J.P. O'Neil. Lawrence Berkeley National Laboratory, Berkeley, CA, USA.</i>	150
The isotope production facility at Los Alamos National Laboratory. <i>R.W. Atcher, R. Heaton, E.J. Peterson and the Isotope Production Team. Los Alamos National Laboratory, Los Alamos, NM, USA</i> ...	151
Radioactive ion beams at Lawrence Berkeley National Laboratory. <i>J.P. O'Neil, H.F. VanBrocklin et al. Lawrence Berkeley National Laboratory, Berkeley, CA, USA.</i>	152
Romanian radiopharmaceuticals market and the possibilities for supplying its demands. <i>L. Popa-Simil National Inst. For Nuclear Physics & Engineering, Bucharest-Magurele, Romania.</i>	154
Cyclone 18/9 & 10/5 user community - second workshop. <i>St. Preusche, C. Dupont, R. Verbruggen, F. Vamecq, G. Bormans. Forschungszentrum Rossendorf, Dresden, Germany.</i>	155

TARGETRY/IN-TARGET CHEMISTRY

Organizers: <i>Thomas J. Ruth and David Schlyer</i>	157
Introduction to the session. <i>Tom Ruth, TRIUMF and David Schlyer, BNL</i>	158
INVITED TALK, Relationship of Hot Atom Chemistry to PET Radionuclides Production. <i>M.J. Welch, Washington University School of Medicine, St. Louis, MO, USA</i>	159
Neutron monitoring: a useful diagnostic tool for (p,n)- targets. <i>G. Firnau, B. Alvord and D. Williams. McMaster University Medical Centre, Hamilton, ON, Canada and CTI, Inc, Knoxville, TN, USA</i>	161
Tritium in [¹⁵ O]water, its identification and method of removal. <i>T. Sasaki, S. Ishii, K. Tomiyoshi, T. Ido, J. Miyauchi and M. Senda. Positron Medical Center, Tokyo, Japan</i>	165
Impurity “hot atoms” in a role a structure-sensitive physical-and-chemical probes with an estimation of a condition of the cyclotron targets after irradiation. <i>I.E. Aleskeev, A.E. Antropov. State University, St. Petersburg, Russia</i>	168
A pure ¹¹ CH ₄ production via ¹¹ B(p,n) ¹¹ C reaction using sintered boron disc target. <i>Al-Rayyes Hamid, Syrian Atomic Energy Commission of Syria, Damascus, Syria</i>	178
Methane Production in small volume, high pressure gas targets: further studies. <i>K.R. Buckley, J. Huser, S. Jivan and T.J. Ruth. TRIUMF, Vancouver, BC, Canada</i>	179
Irradiation of ammonia at liquid nitrogen temperatures: the mechanistic implications for direct production of [¹³ C]HCN. <i>M.L. Firouzbakht, D.J. Schlyer and J.S. Fowler. Brookhaven National Laboratory, Upton, NY, USA</i>	182
A modified method to form [¹³ C]methanol on a column for synthesis of [¹³ C]methyl iodide. <i>E. Priboczki-Sarkadi, Z. Kovacs, G. Horvath and P. Lehtikainen. Hungarian Academy of Sciences, Debrecen, Hungary and Abo Academi University, Turku, Finland</i>	184
Measurement of the specific activity of cyclotron-produced [¹³ C]methane by capillary gas chromatography. <i>C.J. Steel, S.K. Luthra, F. Brady and V.W. Pike. Hammersmith Hospital, London, UK</i>	186
Preparation of [¹³ C]iodomethane with low levels of carbon-12 contamination using a GE MeI microlab. <i>F.I. Aigbirhio, J.C. Clark, S.P.M.J. Downey. Wolfson Brain Imaging Center, Cambridge, UK</i>	190
GENERAL DISCUSSION	
Organizers: <i>Ken Krohn and Jean-Luc Morelle</i>	192
Appendix 1: Supplemental Information	
Purification of [¹⁸ O] enriched water contaminated with acetonitrile by helium bubbling. <i>Christoph Mosdzianowski. Coincidence Technologies s.a., Liège, Belgium</i>	200
Ozone photocombustion of [¹⁸ O]water prior to distillation. <i>R.J. Nickles, University of Wisconsin, Madison, WI, USA</i>	201
Tritium on [¹⁸ O]water. <i>S. Schwarz, Washington University, St. Louis, MO, USA</i>	202
Appendix 2: List of Attendees	
	203
